The technical features supplied in this catalogue are non binding and no legal action can be taken against such material. Dana Brevini will not be held responsible for information and specifications which may lead to error or incorrect interpretations. Given the continuous technical research aimed at improved technical features of our products, Dana Brevini reserves the right to make change that are considered appropriate without any prior notice. This catalogue cannot be reproduced (in whole or in part) without the prior written consent of Dana Brevini. This catalogue supersedes all previous ones.

Use of the products in this catalogue must comply with the operating limits given in the technical specifications. The type of application and operating conditions must be assessed as normal or in malfunction in order to avoid endangering the safety of people and/or items..

The FP series power pack is an easy-to-assemble, compact, electro-hydraulic unit. With its versatility and modularity, it offers many combinations of hydraulic circuits to suit various requirements of plant design. This catalogue has been written to help the user choose the components for the power pack required for the specific application. However, the catalogue cannot foresee all the combinations that may be executed, so in some cases it may be necessary to consult our commercial engineering department.

For applications with very complex circuits, standard modular blocks for Cetop valves and other special blocks can be installed on the power pack, or blocks built to order can be included.

A few applications:

- Fork lifts
- Lifting platforms and beds
- Automotive lifts
- Cranes for small trucks
- Snowplows
- Industrial automation (machine tools, food industry, textile industry)

You can choose from a wide variety of components with the following specifications:

- Gear pumps - Group 05 / 1 - from 0.25 to 9.8 cc.
- DC motors, 12/24 V, light-duty service, from 0.35 to 3 Kw
- Single and triple-phase motors with power ratings of up to 4 Kw - in a standard version or built to the customer's specifications (with minimum overall dimensions)
- Tanks in sheet steel with capacities of up to 25 litres
- Tanks in plastic with capacities of up to 10 litres

A fundamental part of the power pack is the endhead, which is made of die-cast aluminum alloy. The parts and dimensions of this component are shown below.

Operating limits

- Intermittent peak pressure: 290 bar (depending on pump type)
- Maximum flow rate: 20 l/min
- Maximum operating temperature:
 - 80°C (with sheet steel tank)
 - 70°C (with polyethylene tank)
 - 60°C (with polypropylene tank)
- Mineral-based hydraulic fluid: ISO 6743-4 (DIN 51524)
 - Minimum viscosity: 12 mm²/s
 - Maximum viscosity: 80 mm²/s
 - Maximum viscosity at start-up: 500 mm²/s
- Minimum ambient temperature – 15°C
- Maximum ambient temperature 40°C (with peaks of 50°C)

The validation of the endhead follows a life-test with 250 bar pulsed pressure repeated for 100.000 cycles

Operating pressure is controlled by the maximum pressure valve and the type of pump used (in terms of performance) may be determined by the maximum pressure valve. Therefore, it is essential not to change the maximum pressure valve. If necessary, contact our technical service department

Installation

- 1) The power pack must be mounted using the M10 holes on the endhead.
- 2) The power pack must not come into contact with sheet metal, protective guards or any parts that may vibrate and transmit noise.
- 3) The ports on the endhead have been identified by the letters A-B-C. The hydraulic connection must be made with fittings with cylindrical thread and with copper or rubber sealing gaskets (O-rings).
- 4) After the electrical connections have been made, check the direction of motor rotation by executing short pulses of 1 second each (max.): the motor must turn anti-clockwise, as shown in the figure.

The tank must be filled with new mineral-based, ISO 6743/4 fluid: it is important to filter the fluid while filling the tank.

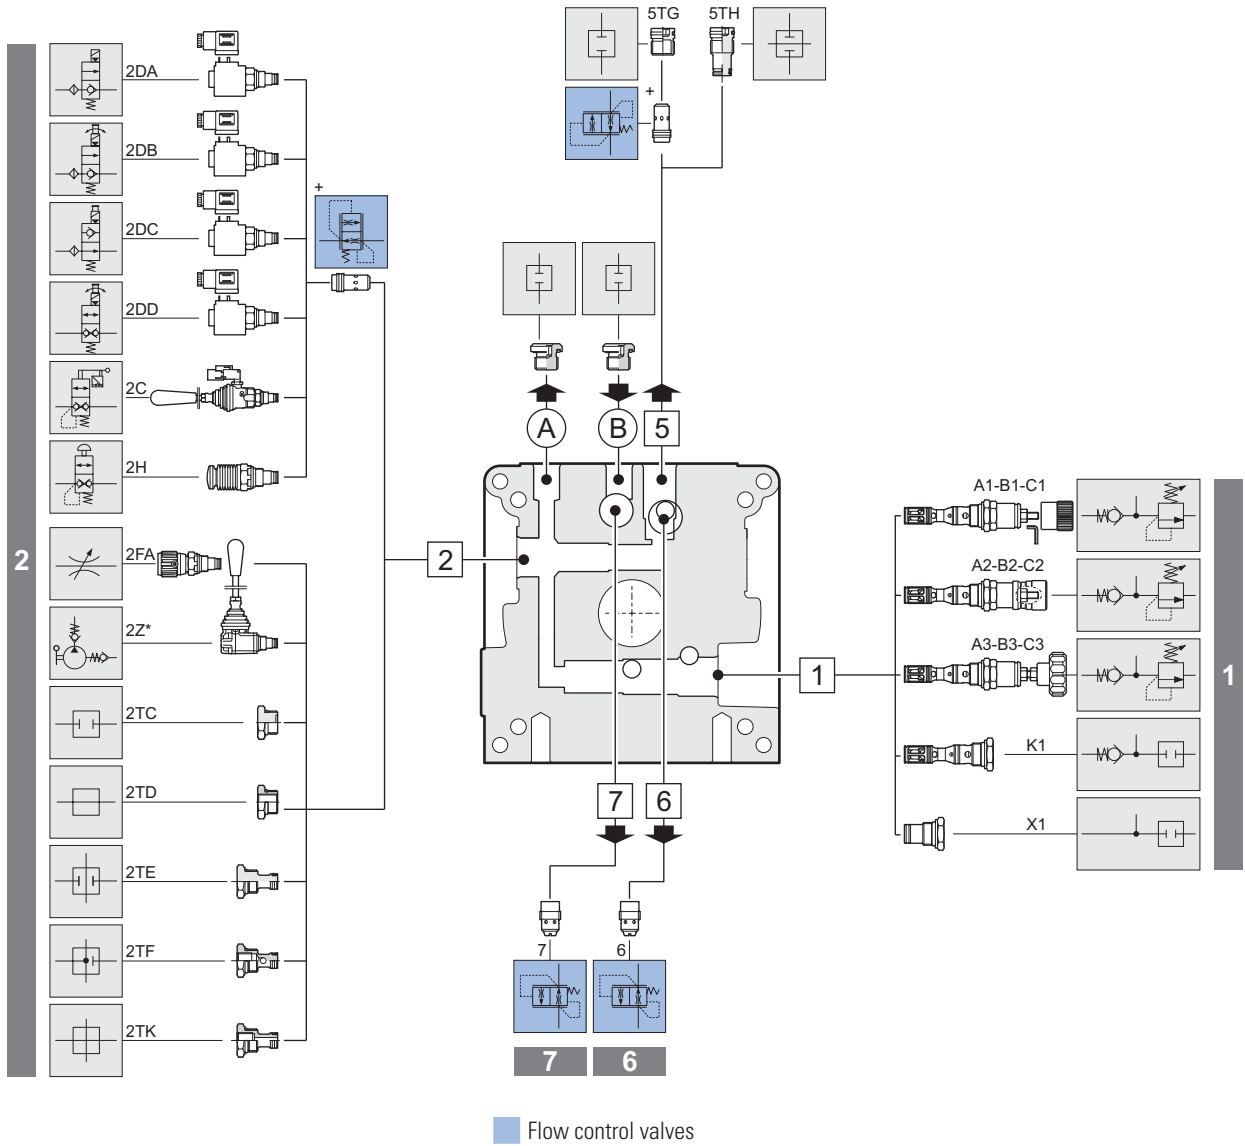

Symbols used in this catalog:

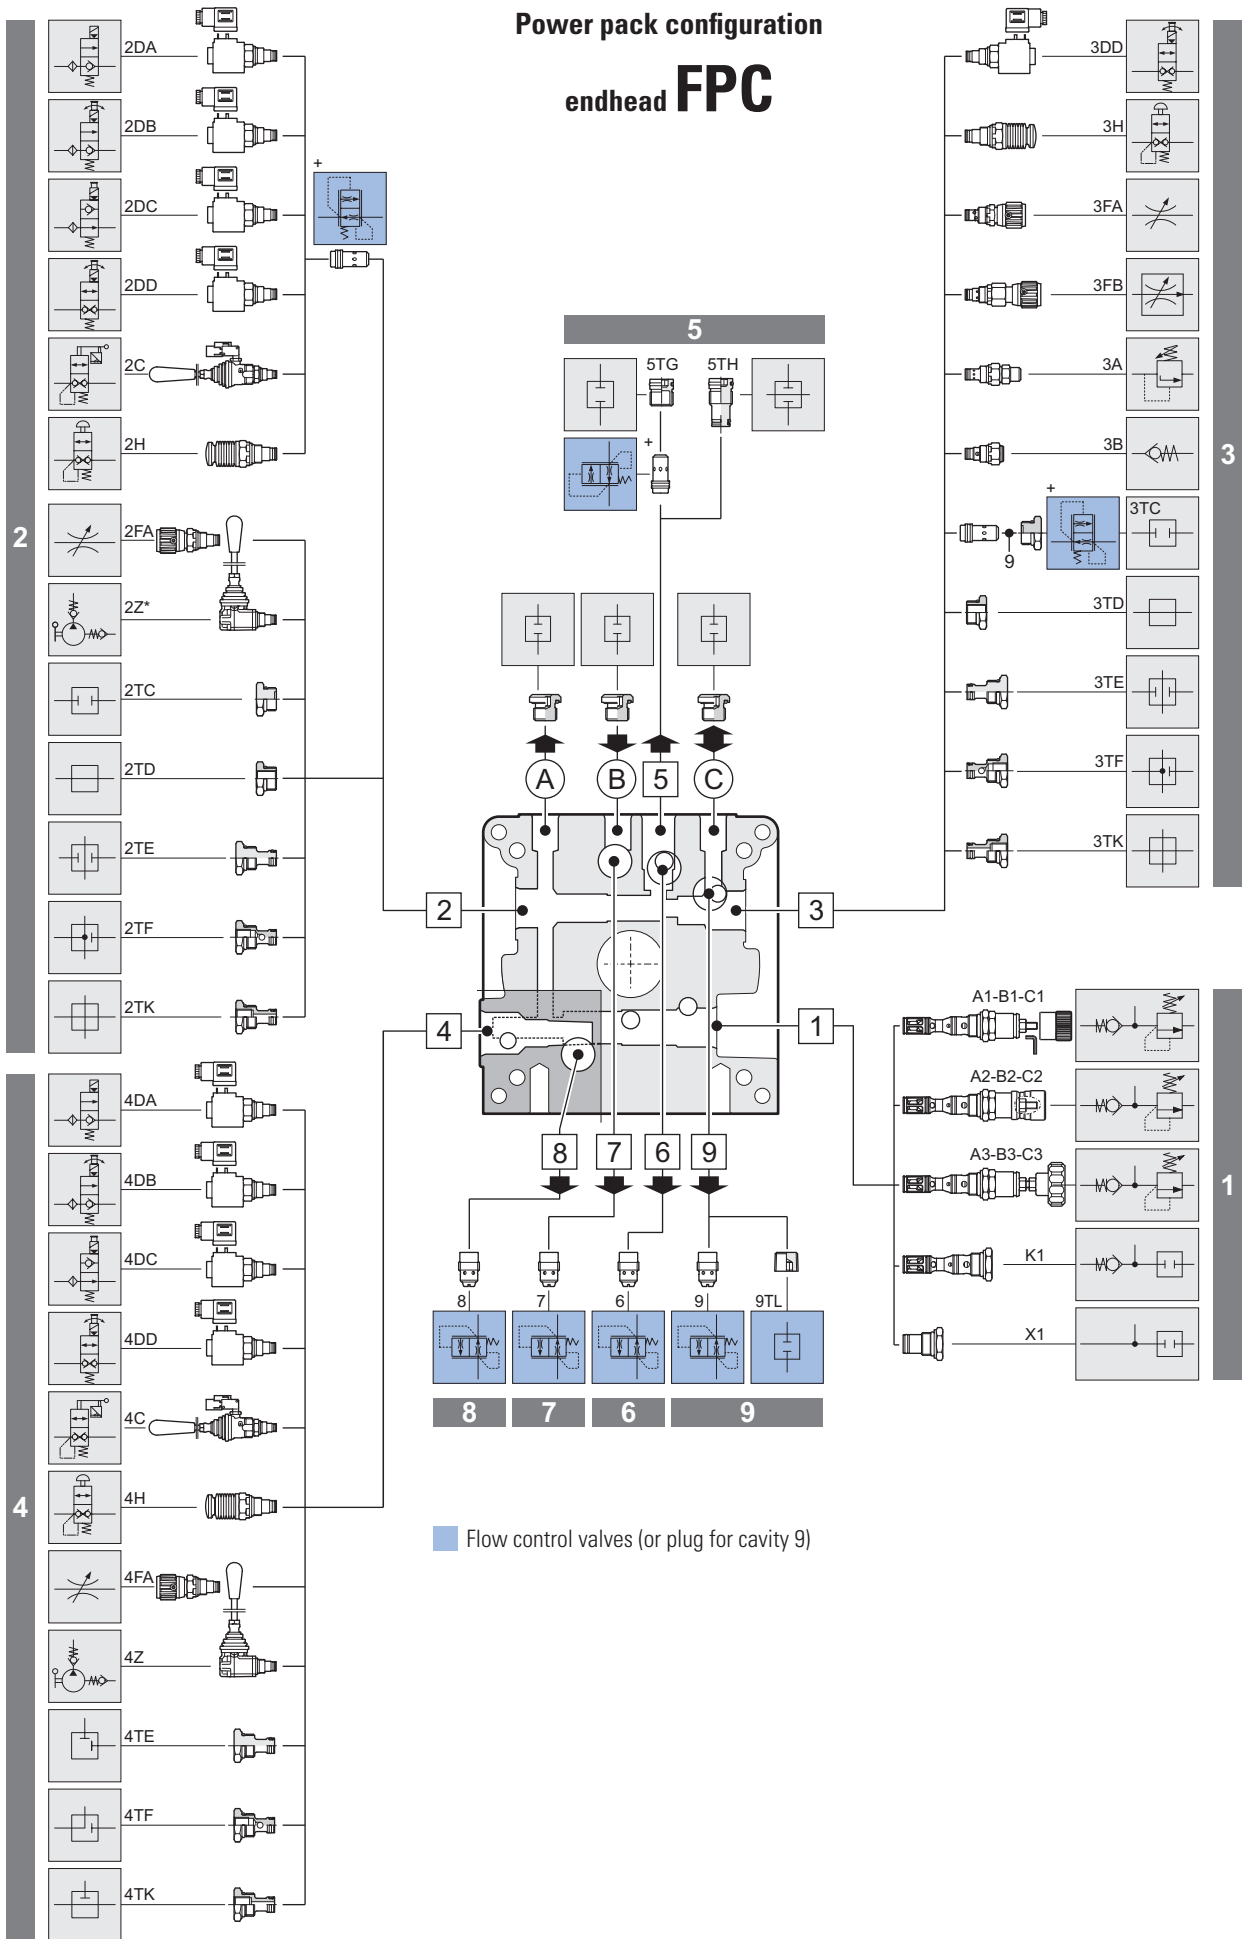

| | |
|---|---|
| | Important data/information |
| | Mounting endhead side |
| | Ground floor |
| | Electrical connection boxes on AC motors |
| | Poles and/or starting relays on DC motors |
| | Fill plug with breather and level stick |
| | Fill plug with breather |
| | Standard plug (closed) |
| | Standard oil fill plug |
| | Fill plug with breather |
| | Fill plug |
| | Fill plug with check valve |
| | Fill plug with back check |
| | Drain plug with magnet |
| | Plug (or level stick) with visual indicator |
| | Drain plug |
| * | Fields to be completed |

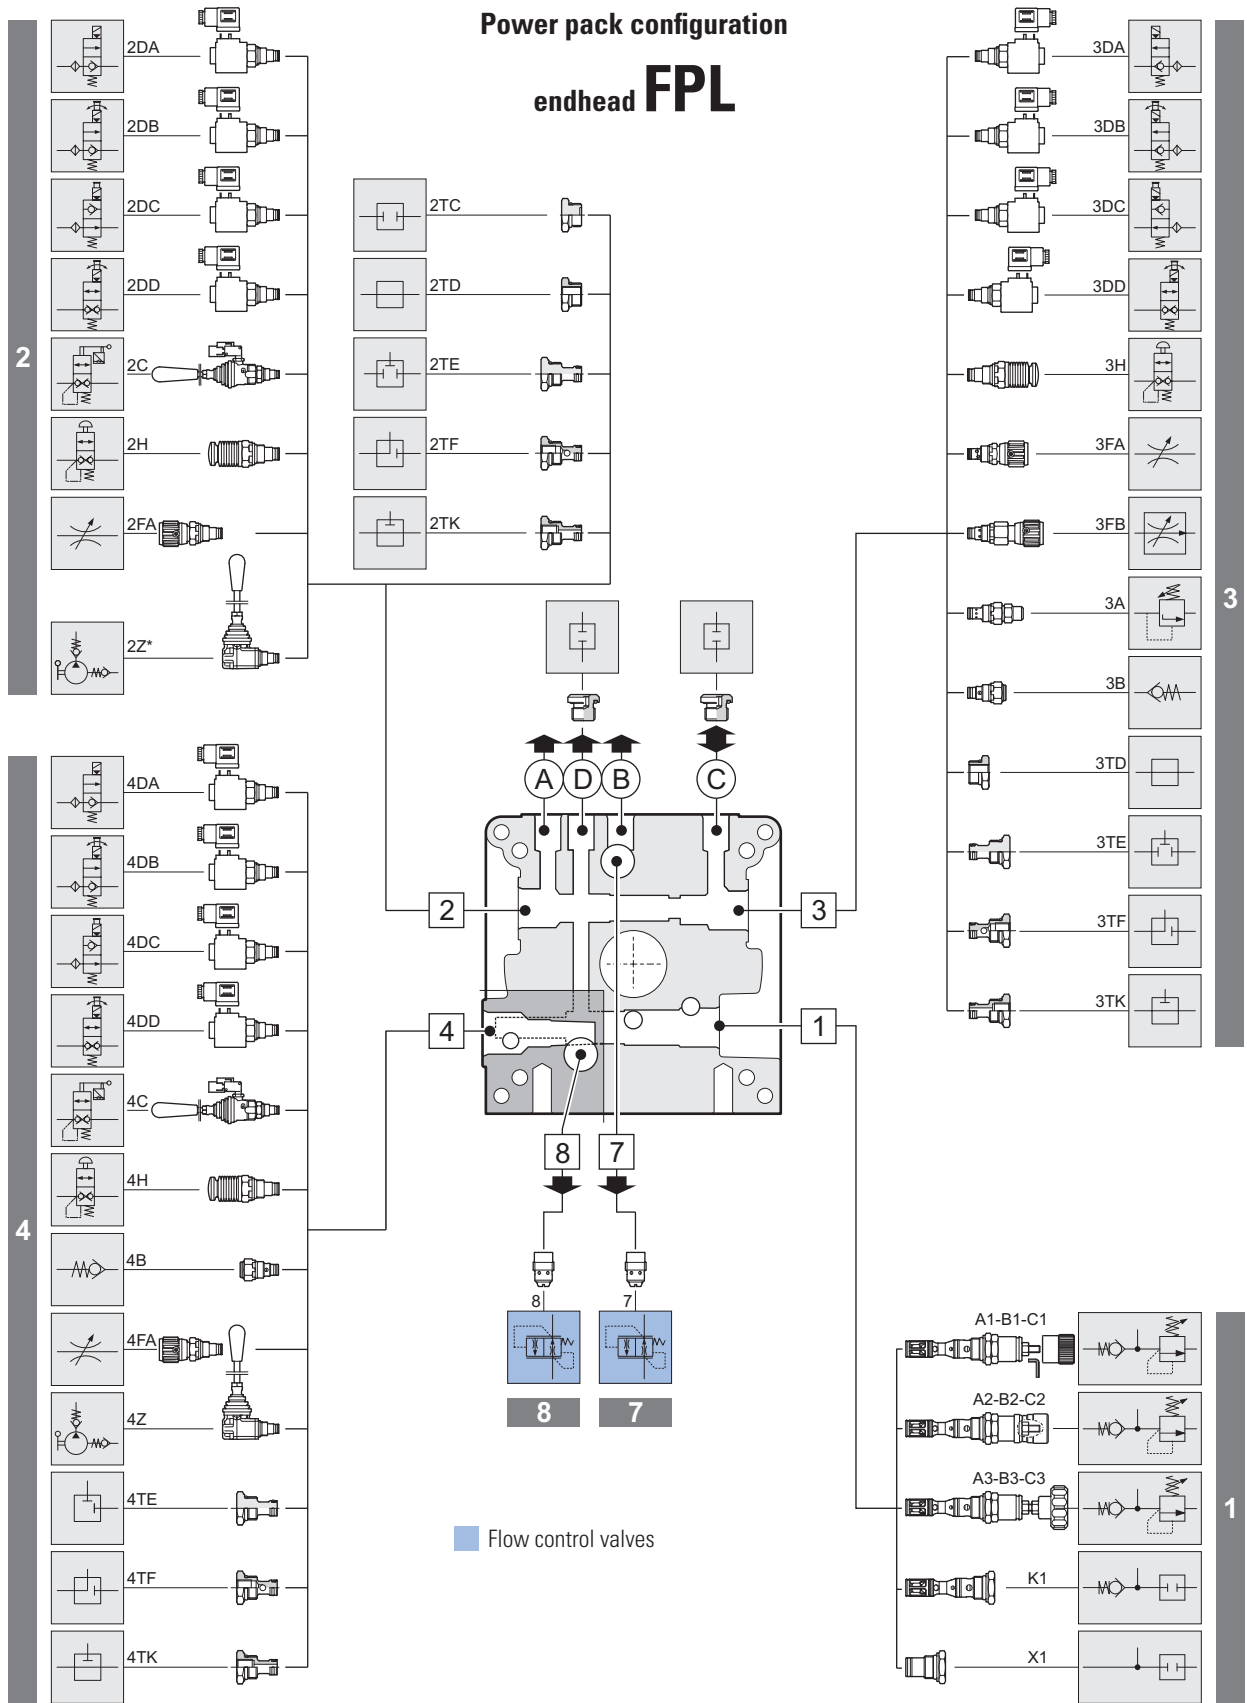

Power pack configuration

endhead **FPA**

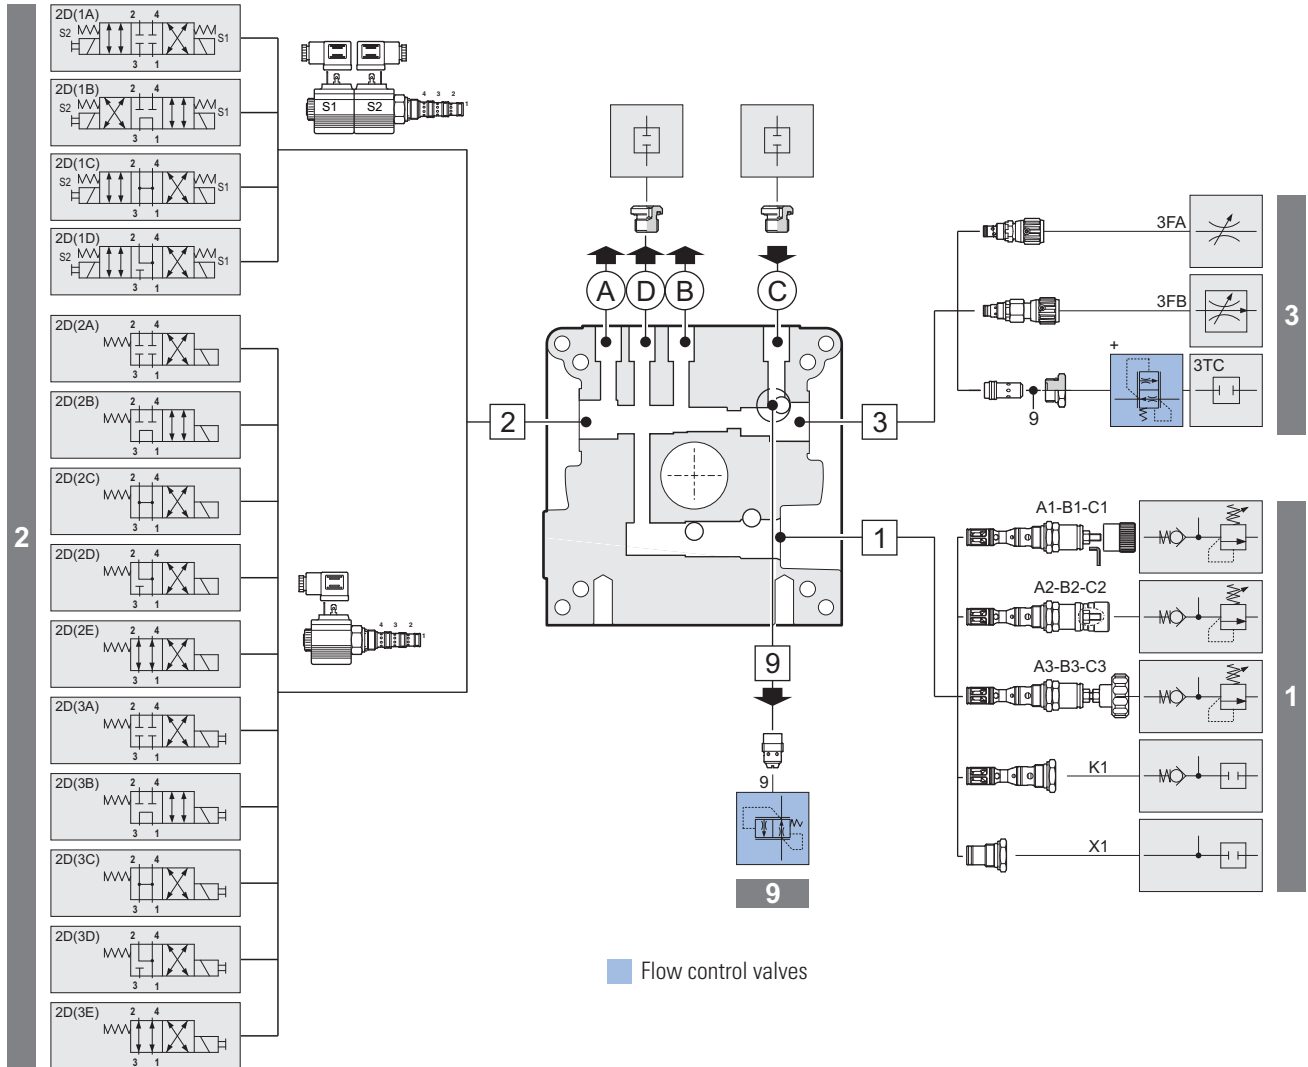

i

Power pack configuration endhead **FPE** (for directional control valves)

With its great modularity, the FP series of power packs can create multiple configurations which satisfy requirements in a wide range of applications. To make it easier to choose components, the power pack is subdivided into sections.

SECTION I - SERIE, FLANGE TYPE, VALVES ON CAVITY 1

FP Series Powerpacks are based on the Flange features. The Flange is the core of the unit, on the flange are mounted all the valves, the pump, the motor and the reservoir. The FP Flange is available in several Versions (with different tooling options). The Flange Version must be chosen depending on the type of Hydraulic Circuit Layout required. Together with the Flange Version, it is required to select the Valves to be mounted in the Various Cavities. 1 (Main Pressure Relief Valve).

SECTION II - VALVES

Depending on the Type of Hydraulic Circuit Layout to be realized, it is required to Select the Valves for each of the available Cavities. In order to correctly build up the Ordering Code, it is required to use the following procedure. Peripheral Cavities (it is mandatory to mention all the Cavities in Numeral Order): starting from Cavity 2, mention all the Cavities and the Valves, Plugs or Fittings to be mounted in said Cavity. Internal Cavities: normally connected to Tank (It is not mandatory to mention, but if required it should be done in Numeral Order): starting from Cavity 6, mention all the Internal Cavities where a Valve (usually a Return Line Valve) is mounted, Selecting the Valve Type to be mounted in said Cavity. Outputs, see description in the Table.

SECTION III - PUMPS

It is mandatory to mention this section, defined by the letter P. Depending on the required features, select the pump from the table provided.

SECTION IV - TANKS

This section is defined by the letter S. Depending on the required features, select the reservoir from the list provided. If no Reservoir is required, and also no Suction / Return Kit is required, please omit this section. If no Reservoir is required, but a Suction / Return Kit is required, please jump to Section V (defined by letter G).

SECTION V - TUBES KIT (suction and return, only for tanks on the catalog)

This section is defined by the letter G. In order to define this Section, please select the Reservoir Type anyways.

SECTION VI - MOTORS

This section is defined by the letter M. Depending on the Type of Hydraulic Circuit Layout to be realized, it is required to Select the Motor Type. If no Motor is required, and no Transmission Kit is required, please omit this section. If no Motor is required, but a Transmission Kit is required, please jump to Section VII (defined by letter T).

SECTION VII - TRANSMISSION KIT (only for motors on the catalog)

This section is defined by the letter T. Select the kit as per Table provided.

SECTION VIII - BLOCKS

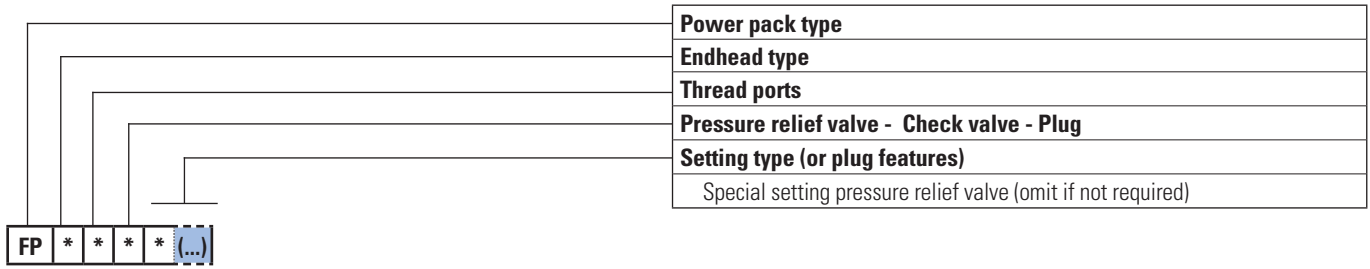

This section it is not mandatory, depending on the Type of auxiliary Block required, definition Letter changes:
J, Blocks with CETOP type of interface for Solenoid Valves;
K, Bankable Valves Interface – Horizontal (Parallel to Unit Axis);
W, Bankable Valves Interface – Vertical (Perpendicular to Unit Axis);

SECTION IX - ACCESSORIES

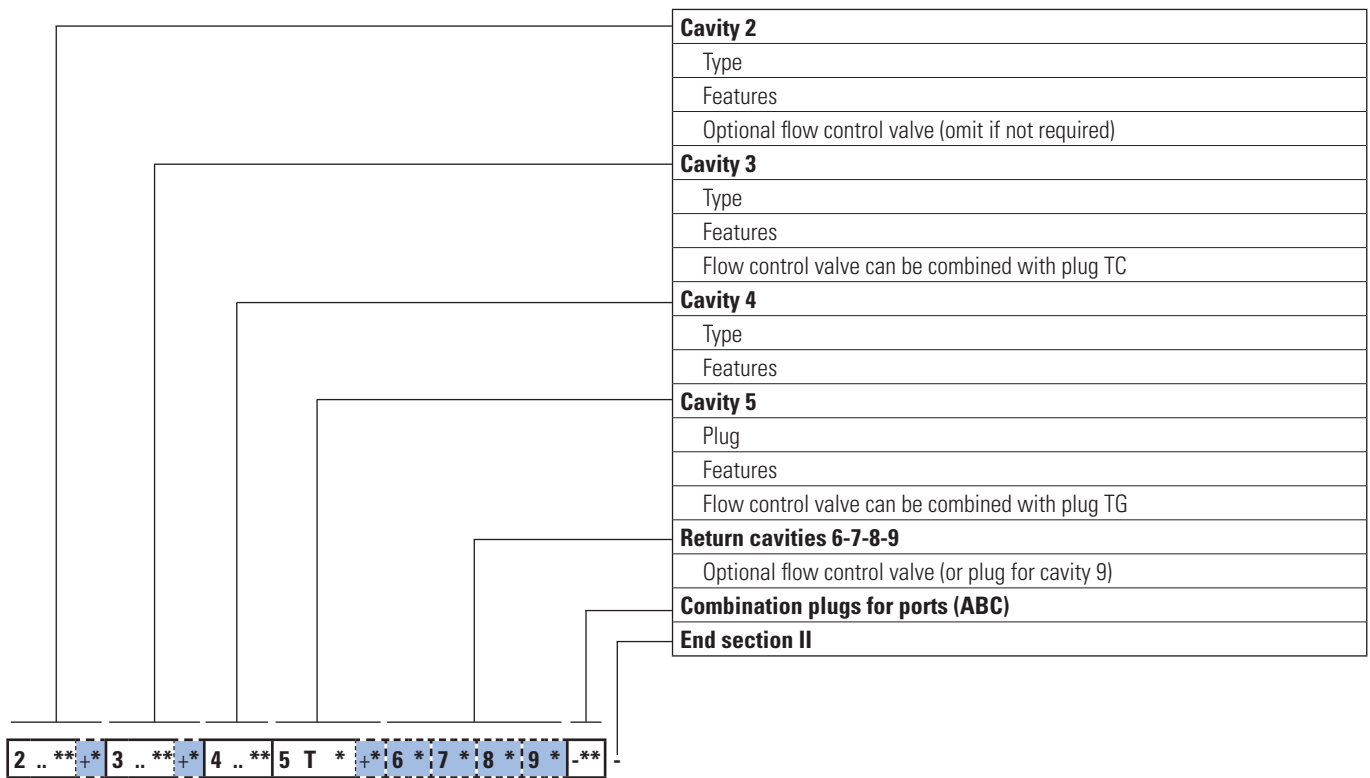

his section it is not mandatory, is defined by the letter R. Check the available options in the list provided. Accessories must be listed in Alphabetical Order.

SECTION I - SERIE, ENDHEAD, VALVES ON CAVITY 1

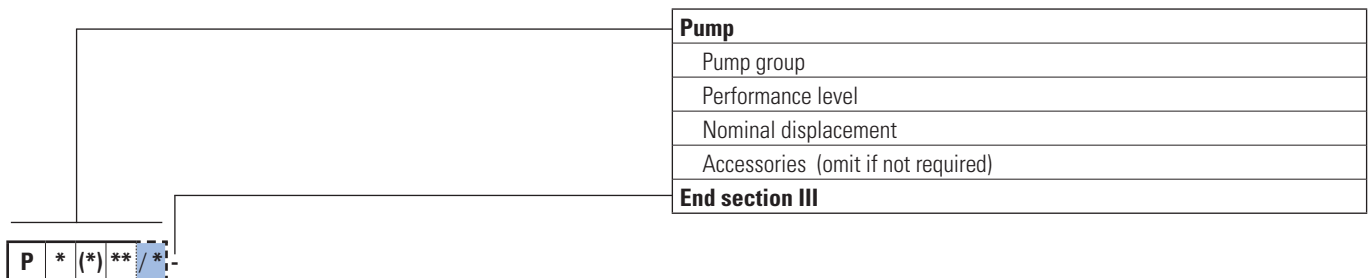

i

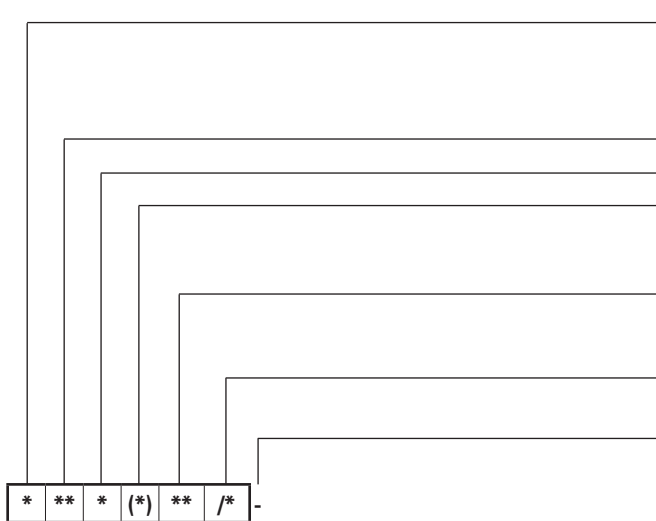

SECTION II - VALVES

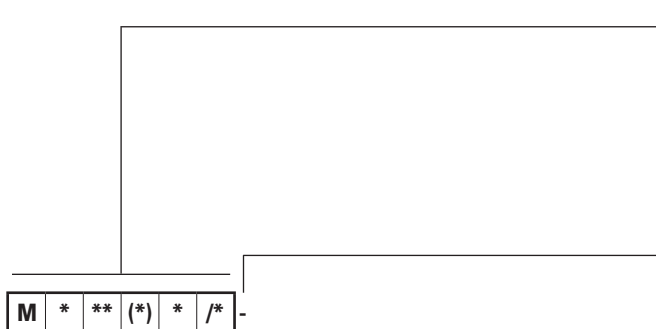

SECTION III - PUMPS

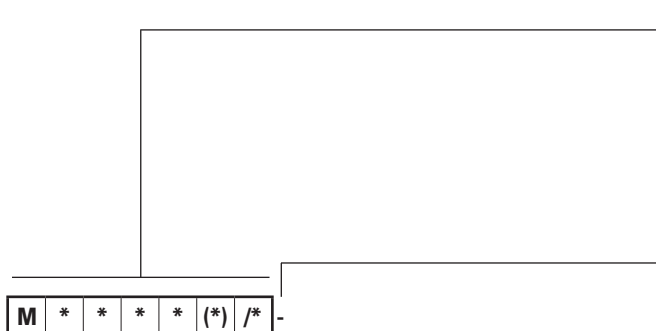

SECTION IV - TANKS / SECTION V - TUBES KIT

| | |
|---|--|
|  | Section: S = tank (with tubes kit); G = only with tubes kit, without tank; OMIT if without tank and without tubes kit |
| | Capacity liters |
| | Features (material and construction) |
| | Mounting position: H = horizontal; V = vertical |
| | Variants 00 = standard, no variant; OMIT if with tubes kit (section "G") |
| | Orientation OMIT if with tubes kit in vertical mounting position (section "G") |
| | End section IV and V |

SECTION VI - MOTORS

| | |
|--|--|
|  | DC motor |
| | Voltage |
| | Power / Size |
| | Version |
| | Accessories 0 = whitout accessories; |
| | Orientation |

| 9 Return | G3/8" | — | • | — | • |

1) blocks interface

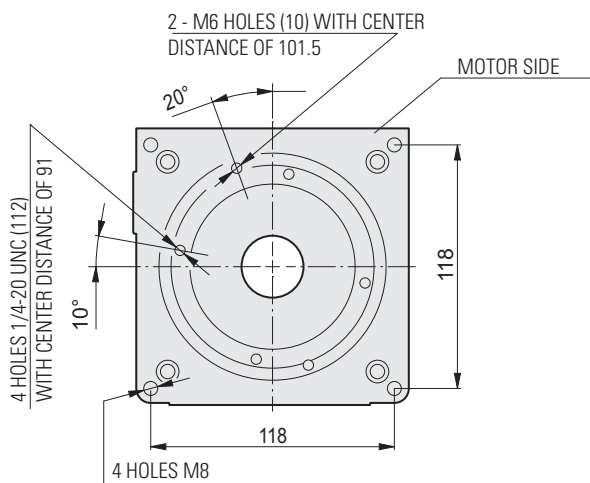

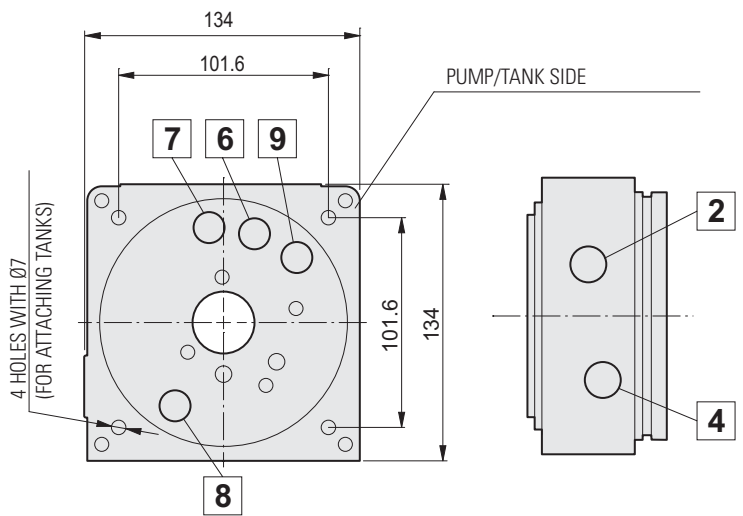

2) available only for FPA - FPC endhead

3) the cavity 5 is not accessible with blocks mounted (section IX).

The number of cavities tooled identify the endhead type:

There are three types of cavities:

- **Peripheral cavities**, which can be accessed externally
- **Return cavities**, inside of the tank.
- **Ports**

The cavities (1-2-3-4-5) and the ports (A-B-C) are marked on the die-cast endhead. The dimensions on the drawing are the same for all endhead.

Cavities dimensions

"Z" : dimension of the coupling side motor

VII

In the order confirmation the code of the "Blocks and CETOP valves" will be converted into a type Jxxxx (xxxx = sequential number).

The blocks mounting kit (interface 90°, heighten) is included on the selection code (see "Mounting kits" table page 88).

Blocks mounting on horizontal power pack

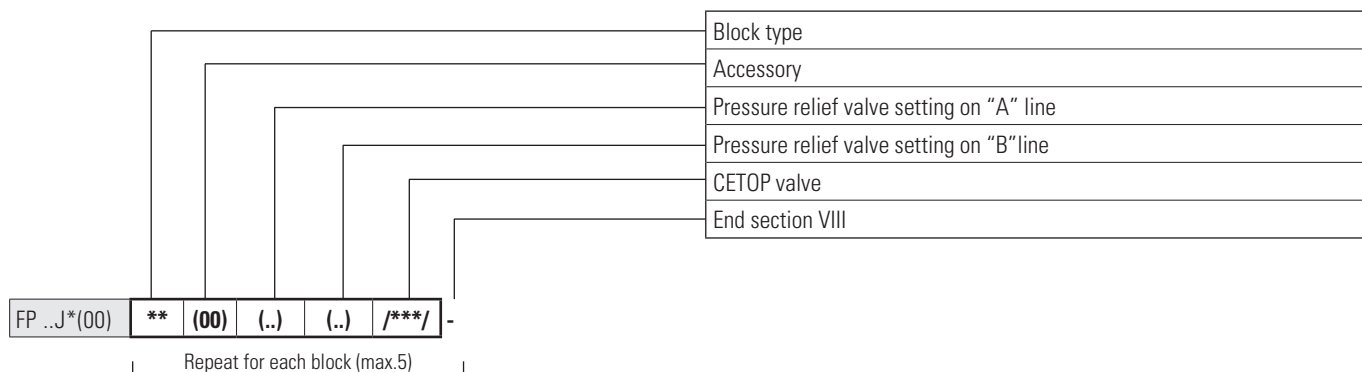

| | | | |
|--|--|--|--|
| <p>J 0</p> <p>Blocks orthogonal to the axis Except AC motors ref. size M-N-P</p> | <p>J A</p> <p>(V60403004)</p> <p>Blocks orthogonal to the axis with heighten For AC motors ref. size M-N-P</p> | <p>J B</p> <p>(V60403005)</p> <p>Blocks parallel to the axis with interface 90° Except AC motors ref. size P</p> | <p>J C</p> <p>(V60403005) (V60403004)</p> <p>Blocks parallel to the axis with heighten and interface 90° For AC motors ref. size P</p> |
|--|--|--|--|

The blocks can not be mounted with motors oriented in position "1" (DC motors, see page 76. AC motors, see page 82).

Blocks mounting on vertical power pack

| | | | |
|--|--|--|--|
| <p>J 0</p> <p>Blocks orthogonal to the axis Except AC motors ref. size M-N-P</p> | <p>J A</p> <p>(V60403004)</p> <p>Blocks orthogonal to the axis with heighten For AC motors ref. size M-N-P</p> | <p>J B</p> <p>(V60403005)</p> <p>Blocks parallel to the axis with interface 90° Except AC motors ref. size P</p> | <p>J C</p> <p>(V60403005) (V60403004)</p> <p>Blocks parallel to the axis with heighten and interface 90° For AC motors ref. size P</p> |
|--|--|--|--|

The blocks can not be mounted with motors oriented in position "1" - DC motors, see page 76. AC motors, see page 82.
