## AM.5.VS... MODULAR PRESSURE SEQUENCING VALVES CETOP 5

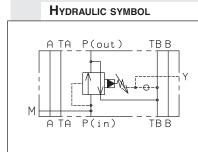

The sequence valve are used to assure that a secondary circuit is pressurized when the setting pressure with a changing flow to up 90 l/min (see diagram).

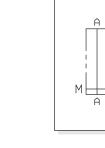

Three spring types allow adjustment within the range 7  $\div$  250 bar. Manual adjustment is available by a grub screw or plastic knob.

The cartridge used is the "CVS" type.

## MINIMUM SETTING PRESSURE

Curves n° 1 - 2 - 3 = setting ranges

The fluid used is a mineral oil with a viscosity of 46 mm<sup>2</sup>/s at 40°C. The tests have been carried out a fluid temperature of 50°C.

To change valves AM.5.VS... from internal to external drainage it is necessary:

- screw out the plug on the Y port
- screwout the plug T.C.E.I. M8x1 from the body
- screw in a screw S.T.E.I. M6
- rescrew the T.C.E.I. M8x1 plug on the body

NOTE: the external draining can be used as a piloting line (please, contact ourTechnical Service for other informations)
